Griffith College HTML Worksheets: HTML Structural elements.

Create a folder called lab3 into which you will save all work on this lab.

Part One:

Recreate the layout below.

Consider what elements are needed for each part. You should use all relevant structural elements to organize the content.

The entire page should be contained in a <div> with an id of 'container'. Then use a combination of <header>,<nav>,<section>,<article> and <footer> elements to structure the rest of the content.

Hints:

The top of the page should feature a <header>.

The logo is available in the this week's file.

The main navigation should be in a <nav> element.

Consider using a <section> element with a suitable ID for the main 'content' section.

Consider where each 'article' might begin and end.

Use <aside> for the related stories section.

You also need to work out what other elements to use. (Paragraphs, lists, images, captions, headings, links etc.)

The first story features the following table:

Usage share of desktop browsers for June 2013						
Source	Chrome	IE	Firefox	Safari	Opera	Other
StatCounter	42.68%	25.44%	20.01%	8.39%	1.03%	2.44%
Clicky	38.92%	29.08%	21.22%	9.28%	1.17%	0.32%

Recreate it, including the caption, table headers (). Make the first column text link to the following pages:

StatCounter: http://gs.statcounter.com

Clicky: http://clicky.com/marketshare/global/web-browsers/

(You do not have to style the table – we will look at this later in the course) The main navigation links can be dummy links, just put in # as the href. The main article headline should link to article.html (as should the "Read

more..." link)

The related story links should go to:

TechCrunch: http://techcrunch.com/

Hacker News: https://news.ycombinator.com/

CNET: http://www.cnet.com/

The Register: http://www.theregister.co.uk/

Usage share of desktop browsers for June 2013
Source Chrome IE Firefox Safari Opera Other
StarCounter 42.68% 25.44% 20.01% 8.39% 1.03% 2.44%

Clicky 38.92% 29.08% 21.22% 9.28% 1.17% 0.32%

Ut ut dapibus misl. Sed nec vulputate justo, eget elementum erat. Praesent turpis nisi, porta at sollicitudin vitae, faucibus id uma. Maecenas at tempus augue, et aliquam purus. Duis eu odio porta, lobortis justo ac, suscipit odio. Ut lectus tortor, vulputate ut ultrices vitae, blandit eu ligula. Etiam malesuada libero nec dui adipiscing posuere. Vestibulum ac ligula vitae velit placerat porta nec sit anet mauris. Maecenas facilisis lorem non hendrerit vehicula. Pellentesque cursus vestibulum dictum. Duis vitae turpis et ligula elementum bibendum. Etiam pulvinar semper enim eget posuere.

Part Two:

Modify your personal profile page from last week and add structural elements. as per the spec for assignment 1

Part Three:

Create article.html, a page to house a single blog post. Add more text (from lipsum.com) and more images (sourced online). [so when one were to click the headline of the first article it would take them to an article detail page]
